

NOTES:

1. Roadway embankment is not delineated on excavation drawings for clarity.
2. Embankment, if any, must be in place before structure excavation is made.
3. If no roadway or ditch excavation or embankment is involved at the wall, structure excavation will be measured from the original ground.
4. No deduction for crib wall member volumes is made from structure backfill quantities.
5. When an embankment settlement period is required, the upper limits of structure excavation are raised to conform to the elevation of the embankment after the settlement period or, when an embankment surcharge is used to the finished surface and grading plane elevations.
6. Embankment slopes to be as steep as material permits. Slope assumed to be 1:1 for purposes of quantity calculations.

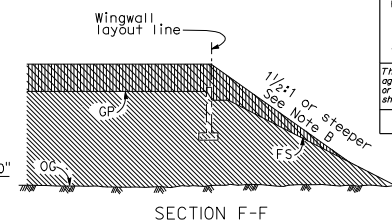

ABBREVIATIONS

OG - Original Ground
FS - Planned Finished Surface
GP - Planned Grading Plane

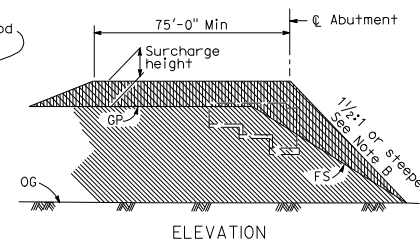

LEGEND

-  Structure Excavation
 Structure Backfill
 Roadway Excavation
 Roadway Embankment
 Bridge Embankment Surcharge

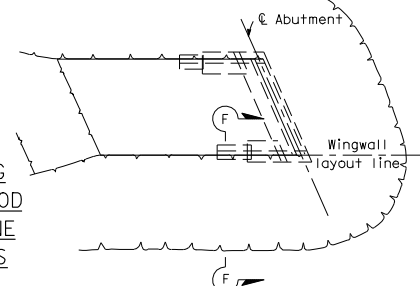

SURCHARGE NOTES:

- A. Bridge embankment surcharges to be placed at locations and to the heights listed in the special provisions.
- B. Surcharge slopes to be as steep as stability of material permits.

The diagram shows a cross-section of a retaining wall. On the left, a vertical line represents the 'R/W or restraint'. The wall itself is shown with a base and a vertical face. The ground level on the left is labeled 'OG' (Original Ground). The ground level on the right is labeled 'GP' (Proposed Ground). The wall is shown with a settlement period, indicated by a horizontal line at the base of the wall. The distance from the wall to the R/W or restraint is labeled '1'-0"'. The distance from the wall to the GP is labeled '1'-0"'. The area between the wall and the GP is labeled 'BACKFILL'.
